                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TGTAATTTGTTGCACACTATGTACCAAAACAACTGAAGACATTGTTTAATAATATTTGCA 722
                                                                                                                                                                                                                                                                                                     /note-*Organ: Left Pelvis; Vector: py7773-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR I; Site_2: Not I; NCI_CGAP_Ch2 is a normalized cDNA library containing the following tissue(s): Chondrosarcoma Grade II. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)8 tail. The sequence tag for this library is
                                                                                                                                                             TAG_LLB=UI-H-EZ1

First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT/T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TAG_TISSUE-osteoarthritic cartilage

612 519 552 /note**Organ: pooled pancreas and spleen; Vector: pcMV-SPORT6; Site_1: Not1; Site_2: EcoRV (destroyed); RNA source anonymous pool of spleen and pancreas from 28 yo male. Library is oligo-dT primed and directionally cloned (EcoRV site is destroyed upon cloning). Average insert size 1.5 kb, insert size range 1-2.5 kb. Library is normalized and enriched for full-length clones and was constructed by C. Gruber (Invitrogen). Research Genetics tracking code 025. Note: this is a NIH_MGC Library.*

/note="Organ: eye; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR I; Site_2: Not I;
UI-E-DWO is a cDNA library containing the following tissue(s): lens. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an ollyo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is CGATTAGCGA. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            49.0%;

             Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

US-09-820-003A-3
US-09-820-003A-3
Sequence 3, Application US/09820003A
Patent No. US20020142382A1
GENERAL IMFORMATION:
APPLICANT: MERKULOV, Gennady et al.
TITLE OF INVENTION: ISOLATED HUMAN RAS-LIKE PROTEINS,
TITLE OF INVENTION: NUCLEIC ACID MOLECULES ENCODING THE
TITLE OF INVENTION: PROTEINS, AND USES THEREOF
FILE REFERENCE: CL001196-
CURRENT APPLICATION NUMBER: US/09/820,003A
CURRENT FILING DATE: 2001-03-29
NUMBER OF SEQ ID NOS: 39
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 3
TEMBERTH: A6050

Sequence 37, Application US/09820003A
Patent No. US20020142382Al
GENERAL INFORMATION:
APPLICANT: MERKULOV, Gennady et al.
TITLE OF INVENTION: ISCLATED HUMAN RAS-LIKE PROTEINS,
TITLE OF INVENTION: NUCLEIC ACID MOLECULES ENCODING THE
FITTLE OF INVENTION: PROTEINS, AND USES THEREOF
FILL REFERENCE: CLO01196
CURRENT APPLICATION UNBER: US/09/820,003A
CURRENT APPLICATION NUMBER: US/09/820,003A
CURRENT FILING DATE: 2001-03-29
NUMBER OF SEQ ID NOS: 39
SOFTMARE: FASTSEQ for Windows Version 4.0
SEQ ID NO 37
LENGTH: 601
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ; TYPE: DNA; ORGANISM: Homo sapien US-09-820-003A-37

                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                           Score

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antiallergic; hepatotropic; antidiabetic; antiliflammatory; antiulce: vulnerary; anticonvulsant; antibacterial; antifungal; antiparasitic; cardiant. The polynucleotides and polypeptides are useful for preventing, treating or ameliorating a medical condition in e.g. hums mice, rabbits, goats, horses, cats, dogs, chickens or sheep. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. The polynucleotides are useful for chromosome identification. They are also useful as probes diagnosing a disorder related to the female reproductive system, particularly breast and/or ovary cancer. They are also useful in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  mice, rabbits, goats, horses, cats, dogs, chickens or sheep. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. The polynucleotides are useful for chromosome identification. They are also useful as probes for diagnosing a disorder related to the female reproductive system, particularly breast and/or ovary cancer. They are also useful in the gene therapy of breast and ovarian cancer. Nucleic acids, protein, antibodies, agonists and antagonists from the present invention are useful in the diagnosis, treatment and prevention of cancer, immune disorders, cardiovascular disorders, wound healing, neurological diseases and infectious disease. AAC59957 to AAC59955 and AAB34772 represents sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         human secreted proteins given in AAB34773 to AAB34822. AAB34823 to AAB34852 represent human secreted polypeptide sequences and proteins AAB34852 represent human secreted polypeptide sequences and proteins no fine present invention. Human secreted proteins have activities based on the tissues and cells the genes are expressed in Examples of activities include: cytostatic; immunosuppressive; nootropic; neuroprotective; antivital; antiallergic; hepatotropic; antidiabetic; antilalergic; hepatotropic; antidiabetic; antiferance; antilalergic and antiallergic proteins antiallergic antidiabetic antidiabe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      vulnerary; anticonvulsant; antibacterial; antifungal; antiparasitic; and cardiant. The polynucleotides and polypeptides are useful for preventing, treating or ameliorating a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Disclosure; Page 416-417; 425pp;

                                                                                                      Ş
                                                                                                                                                                                                                                             The polynucleotide sequences given in AAC59966 to AAC60015 encode the Chaman secreted proteins 1 to AAB34822. AAB34823 to AAB34823 represent human secreted polypeptide sequences and proteins CC AAB34827 represent human secreted polypeptide sequences and proteins CC invention. Human secreted proteins have activities based on the tissues CC and cells the genes are expressed in Examples of activities include: CC cytostatic; immunosuppressive; noctropic; neuroprotective; antivital; cc antiallergic; hepatotropic; antidiabetic; antifungal; antiparastic; and CC cardiant. The polynucleotides and polypeptides are useful for CC preventing, treating or ameliorating a medical condition in e.g. humans, CC mice, rabbits, goats, horses, cats, dogs, chickens or sheep. The CC increase or decrease storage capabilities. The polynucleotides are useful for CC useful for chromosome identification. They are also useful as probes for CC useful for chromosome identification. They are also useful in the gene CC therapy of breast and/or ovary cancer. They are also useful in the gene CC therapy of breast and/or ovary cancer. They are also useful in the gene CC tharpay of breast and ovarian cancer. Nucleic actids, protein, antibodies, CC agonists and antagonists from the present invention are useful in the CC diagnosis, treatment and prevention of cancer, immune disorders, cardiovascular disorders, wound healing, neurological diseases and CC used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoliesis regulating activity, tissue growth factor activity, haematopoliesis regulating activity, tissue growth factor activity. Immunomodulatory activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopolesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.
                                                                                                                                                                                                                                                                           Note: The sequence data for this patent did not form specification, but was obtained in electronic format at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 20; SEQ ID NO 27417; 1399pp + Sequence Listing; English.

                       antidiabetic; antiinflammatory; antiulcer; vulnerary; anticonvulsant; antibacterial; antifungal; antiparasitic and cardiant activity. The polynucleotide and protein sequences are used in the diagnosis of cancer, particularly breast and ovarian cancer. The nucleic acid sequences, proteins, agonists and agonists may also be used in the diagnosis, prevention and treatment of immune disorders e.g. Addison's disease,
                                                                                                                   proteins AAB58711 - AAB59128. The DNA and protein sequences are associated with breast and ovarian cancer. Included in the invention are sequences AAF22032 - AAF22040 and AAB59129 which are used in the invention and characterisation of the DNA and protein sequences of the invention. The breast and ovarian cancer associated DNA, protein, agonist or antagonist sequences exhibit cytostatic; immunosuppressive; neuroprotective; antiviral; antiallergic; hepatotropic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antidiabetic; antiinflammatory; antiulcer; vulnerary; anticonvulsant antibacterial; antifungal; antiparasitic; cardiant; immune disorder; Addison's disease; allergy; autoimmune haemolytic anaemia; autoimmune thyroiditis; diabetes mellitus; Crohn's disease; multiple sclerosis; rheumatoid arthritis; ulcerative colitis;

This sequence is a human Rab protein of the invention, designated RABP-2. The Rab proteins, RABP-1, RABP-2 and RABP-3 are involved invesicle trafflicking, cell function, and cell differentiation. The polypeptides, DNAs and agonists can be used to prevent or treat a disorder associated with an increase in apoptosis, e.g. infectious

                                                                                                               The invention relates to novel isolated human secreted polypeptides (I) cand polynucleotides (II). (I) and (II) are useful for treating confilmentary conditions such as arthritis, nephritis, cronn's disease, considered in increasing haematopolesis, mephritis, cronn's disease, and is involved in increasing haematopolesis, stem cell survival, bone growth can remodeling (I) (II) and modulators of (II) are useful for prophylaxis or treatment of one or more cancers. (II) is also useful for creating transgenic animals useful for studying the in vivo activities of the polypeptide as well as for studying modulators of the polypeptides.

C(I) induces the proliferation of neural cells and regeneration of nerve can brain tissue and is useful for the treatment of central and peripheral nervous system diseases and neuropathies, such as Alzheimer's, can artivity, regulation of hæmatopolesis and is useful for treating myeloid cor lymphoid cell disorders, platelet disorders unch as thromborytopenia culcers, for treating osteoprosis, osteoarthritis, bone degenerative culcers, for treating osteoprosis, osteoarthritis, bone degenerative culcers, for treating osteoprosis, osteoarthritis, bone degeneration of disorders uncluding severe combined immunodeficiency (SCID), bacterial or fungal infections, autoimmune disorders e.g. multiple scierosis, creations and conditions, such as asthma or other respiratory problems. Cc reactions and conditions, such as asthma or other respiratory problems. Cc fertility, metabolism, catabolism, anabolism, storage or elimination of distance effects or other pain reducing effects, immunoglobulin like activity and can act as an antigen in a vaccine composition to raise an combined immunographic consistion of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL101840-ABL16175) and the encoded proteins (ABL0101840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure; SEQ ID NO 6216; 21pp + Sequence Listing; English.
